Pro-Ject RPM 5 Carbon – I´ll call you, Galaktika

Back to Vinyl! With the RPM 5 Carbon Pro-Ject will encourage not vinyl newcomers or re-beginners - that player may possibly attract aliens.

The Pro-Ject RPM 5 carbon easily makes it possible to open up the world of black discs: it represents only moderate demands on the budget and is generally good-natured and frugal: In the test not even dance movements on the floor boards could disconcert it from running smoothly.

Reliable and resistant to resonances it always plays equally precise as alive. Sound impulses are drawn quickly and directly, the sound is full and round - the Pro-Ject proves true audiophile class which seemed not to be possible at the given highly attractive package price.
